

HALO WATER STRUCTURE (Water Charging)

Step 1: Structure water into microclusters

Start with the **WS HALO** vial and direct the light onto the open surface of water for 5-7 seconds for every 16 to 20 fluid oz.

Step 2: Infuse water with botanicals

Repeat the procedure above with any number of vials of your choice. Water will retain the harmonic resonance of each of the vials you choose to infuse your water with. There is no limit on the number of vials you can infuse water with.

*Best practice is to charge your water for the day all at once. For example: Take a **ONE GALLON** container and treat it with the number of vials desired for **30-45 seconds for each vial**.*

Microcluster Water: Powerful Detoxification

Small water clusters (microclusters) for better delivery of harmonic resonance of botanicals into the body, absorption and higher discharge of waste.

Small water clusters are easily hydrated through cell membrane. They carry more nutrients and information of botanicals into the cells and take out more toxins.

WS Halo HO vial -- WATER STRUCTURE

Structures water into micro-clusters for greater cellular permeability (uptake and absorption). This is a physical action that takes place at the molecular level. Water structuring does not remove any impurities, nor does it change the alkalinity levels nor purity of your water.

The **HALO** charged water can be used for: drinking, cooking, brewing tea or coffee and any other consumable water use. Also, you may use any type of container or receptacle for your water. Whichever type you choose does not have any effect whatsoever on the molecular structure of charged water.

Note: *It is your choice which type of water you use for consumption (Alkaline, tap, spring, filtered, reverse osmosis, purified, non-purified, etc.) as long as it is clear H₂O, you will be able to structure it with the **WS HALO** vial. The container you use does not have any effect on the molecular format of the micro clusters once your water is structured.*

Water will remain structured for an indefinite amount of time. We do recommend you charge and consume water as a daily routine for best result. Should you choose to store your drinking water, do so at your discretion.

HALO MULTI VERSE

To understand this necessary component to life, we must understand its chemical properties and how it works in and with our bodies. The water molecule is made up of two hydrogen atoms and one oxygen atom to form the oft-quoted H₂O molecule. However, what you may not know is that water comes in clusters of molecules (rather than single molecules), and tap water contains very large clusters of up to 13 molecules. It is as if 13 groups of water are essentially holding hands.

What this means for your body is that you will feel fuller longer after drinking a glass of tap water, because of the amount of water molecules that need to be processed for hydration. However, if you drink micro-clustered water, or water that contains only five or six molecule clusters, the water will be that much more hydrating, soluble and permeating for the cells and the body. In essence, it's a system that delivers wetter water so that more of the nutrients will be absorbed into the cells at a faster rate.

Sound confusing? Think of micro-clustered water as a handful of Bb's compared to a softball. If you throw the softball at a chain-link fence, it won't pass through. However, if you throw the Bb's at the fence, they pass through seamlessly. Micro-clustered water is like that. It permeates your cells much like the Bb's through the fence, hydrating your body within seconds of drinking, leaving you less bloated and more completely hydrated.

By drinking water that contains fewer molecules, or micro-clustered, you can hydrate your body more quickly and effectively, enhance energy levels, improve your overall aerobic capacity and health and prevent premature aging.
